Software Engineer - Apprentice

PROGRAMMING : Kotlin, Java, Python, C, C++, C#, HTML, CSS, PHP, ASM, JavaScript, TypeScript, XML
TECHNOLOGIES : .NET, Jetpack Compose, Astro, React, React Native, Vite.js, Next.js, Tailwind, Node, Bootstrap
DEVOPS : Docker, Github, Gitlab, Jenkins (Pipeline CI/CD), Maven, Gradle
PROJECT MANAGEMENT : Jira, Notion, Trello
DATABASES : SQL, MySQL, MongoDB, Postgresql, PL/SQL, JDBC
LANGUAGES : English (advanced), French (native)
INTERESTS : Technology monitoring, Innovation, Football, Vidéo Games, Travelling

Experiences

RTE — **Paris, France** (April 2025 - Today)

Front-End Engineer - Apprentice (7 months)

- Integrated the redesigned UI in React for a serious game introducing up to 10,000 employees and university classes to the mechanisms of the french electricity market, within a team of 3 developers, 1 UI designer and 1 UX designer.
- Developed key features such as administrator authentification, game pre-configuration, main lobby, players' selection and onboarding.
- Synchronized game state across multiple clients using websockets, for real time communication, ensuring a seamless and low-latency multiplayer experience.
- Contributed to an internal library and its documentation, added reusable components and modifying the existing ones, to ensure better reusability and flexibility.

Front-End Developper - Intern (5 months)

- Developed a mapping application for monitoring the french electricity distribution network using OpenLayers and MapTiler, within a team of 2 developers, 1 geomatics engineer and 1 designer.
- Developed the UI in React and TypeScript for data visualization.

DYNSEO — **Paris, France** (June 2024 - August 2024)

Android Developer - Intern (3 months)

- Integrated and carried out the complete UI redesign of a Java mobile application (MVC architecture) for cognitive stimulation, for Europe's largest university hospital.
- Implemented key functionalities in a Kotlin mobile application (MVVM architecture).
- Developed Python scripts to automate the generation of JSON files.
- Serialized/deserialized clinical study data to enable communication between the two applications.
- Fixed/adjusted existing functionalities at the customer's request.

Education

EPITA https://www.epita.fr/en/ — **Paris, France** (2025 - 2028)

Master's degree in Computer Science

- Major : Software engineering

UGE - MARNE-LA-VALLÉE'S INSTITUTE OF TECHNOLOGY https://iut.univ-gustave-eiffel.fr/ — **Paris, France** (2022 - 2025)

Bachelor of technology in computer science

- Major : Software Development (design, development and validation)

HENRI BERGSON HIGH SCHOOL — **Paris, France** (2019 - 2022)

General Baccalaureate - honors

- Computer Science (NSI), Engineering Sciences (SI), English literature (LLCE)

Projects

Eiffel Time (JavaScript / TypeScript / React / React Native / HTML / CSS / Tailwind / Vite)

Eiffel Time is a university management application designed to centralize and facilitate the management of grades, absences, communication and timetables for the University Gustave Eiffel.

- Designed a product breakdown structure diagram for product functionality and a work breakdown structure diagram for project planning.
- Designed the mock-ups for the web app and the mobile app.
- Configured the project (monorepo) and chose the technologies best suited to the needs, which reduced the application development time by 3, allowing cross-platform Web, Android and iOS compatibility.
- Developed the UI, for web and mobile, including timetable display, grades and absences management, messaging, notification center and an interface enabling the administrator to modify the database without going through the code.
